

ACOUSTICEL M20 - AD - Soundproofing Wall Panel

Key Benefits

- Significantly reduces airborne noise through a wall.
- Made from 97% recycled rubber
- Minimum loss of wall space (Less than 2 inches or 50mm)
- Effective on lightweight and single skin walls.
- Easy and clean to install.
- Complies with PART E building regulations.
- Supplied in a slab form 1 m x 1m x 20mm thick

Description

A recycled rubber wall panel designed to upgrade the sound insulation properties of party walls in the home and all types of domestic properties. The ideal solution to insulate a noisy neighbour with a minimum loss of room space using this thin concept for soundproofing walls.

M20AD is designed to absorb and reduce the amount of airborne noise which penetrates poorly insulated party walls. Easy to fit, this 20mm thick insulation is simply glued to the existing wall with two layers of 12.5mm plasterboard bonded on top and is an easy solution if you are disturbed by noise from your neighbours.

It is ideal for insulating walls separating stairs and hallways where space is at a premium. Particularly useful for meeting Part E building regulations for airborne noise control through a wall.

Using this system you will get a Sound insulation value of 48dB DnT,W+Ctr which is approx. an 87% reduction in sound transmission.

Please note: This insulation is effective at reducing normal noise levels, that should not normally be heard, for example talking, radio and TV sound. Loud music and bass noise will always be audible although its intensity will be reduced.

ISOLGOMMA

M20 - AD is made in Italy by Isolgomma. These products are imported exclusively by Sound Service (Oxford) Ltd and are all made from recycled materials.

Isolomma are dedicated to the design and development of effective and eco friendly sound insulation materials.

Sound Service has been supplying these products in the UK for over 20 years.
