Making children safer around t

Playtop® impact-absorbing playground surfacing is designed to minimise risks of injury to children who fall from play equipment. Playtop® is the most advanced product in its field. After holding the UK market leadership for over 25 years, it is now marketed by trained and licensed installers in a growing number of other countries. More than a million square metres of Playtop® have been installed worldwide.

Leader in Technology

Playtop® is a continuous, porous material made from rubber granules and polyurethane binders. It is mixed and laid on site as a wet-pour product. The base layer of coarse granules is made from recycled tyre rubber. The top layer consists of finer EPDM rubber granules, available in many bright, permanent colours.

This combination gives properties ideal for a playground surface:

- controlled, optimised deformation to cushion falls safely
- interlocked strength, requiring no separate structural base
- long life with minimal maintenance
- resistance to abrasion, slipping, indentation and ignition
- no hidden hazards
- no joints for vandals to attack
- and an unmatched range of creative design possibilities.

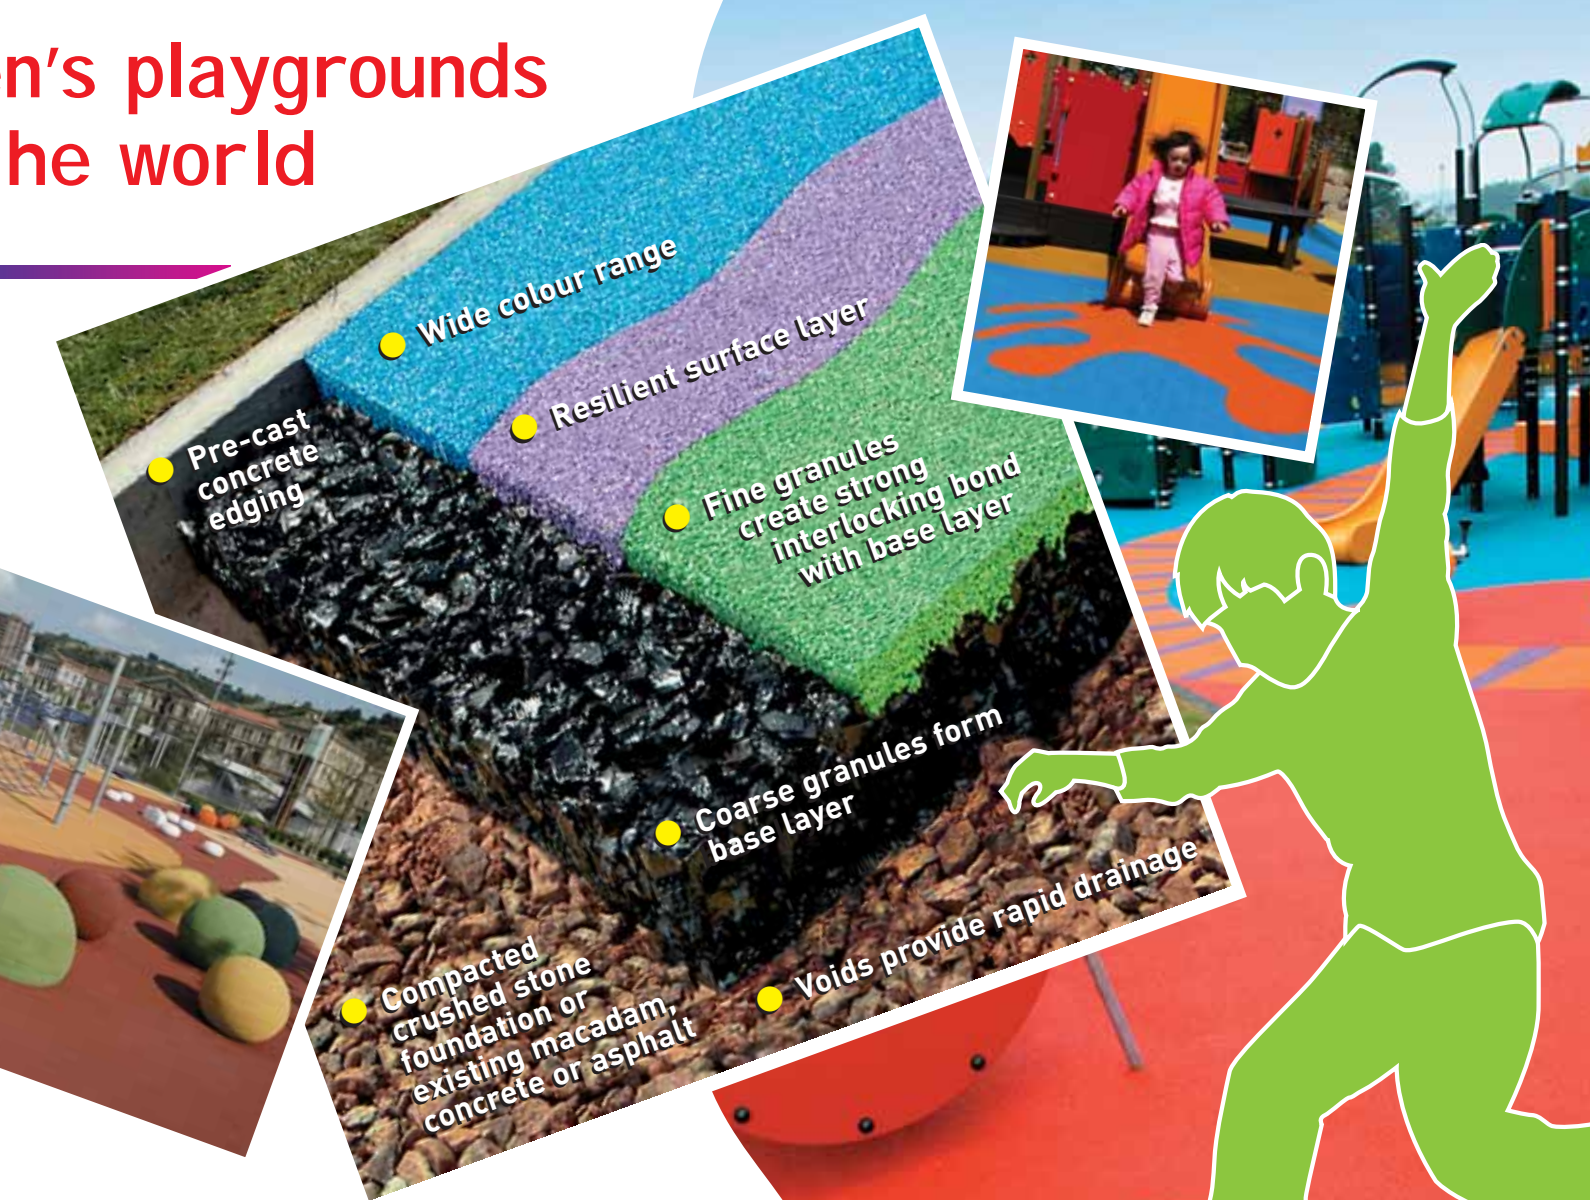

For more detailed information please visit our website www.playtop.com.

Leader in Production

The life-saving performance of **Playtop®** depends critically on the strength and elastic properties of the specialised rubber developed for truck tyres.

To ensure that cleanly cut rubber granules are always available in the right sizes, quantities and quality, **Playtop®** has its own supply. A high-technology recycling plant operated by our sister company recovers the rubber from scrap tyres, producing over 10,000 tons a year of graded granules.

ASTING IMAGINATIVE EXCITING

www.playtop.com

Leader in Design

Today's playgrounds attract children to play safely by offering exciting structures, shapes and colours. At **Playtop®**, we have pioneered use of the play surface as part of the whole design. The huge range of colours coupled with our designers' imagination can create all kinds of patterns and pictures in the surface:

- roadways and rivers
- animals, birds, flowers and insects
- magic trails with footsteps, stepping stones and watersplashes
- playground games

Nor need the surface be smooth and flat. **Playtop®** can be textured for tactile effects, or contoured smoothly into three-dimensional mounds and banks.

Challenge our design skills with your creative imagination! Together we can create children's playgrounds that will be as thrilling as they are safe.

Playtop Limited works internationally with Nike in its **NikeGO Places** programme. This innovative resource management initiative collects worn-out sports shoes of any brand, together with Nike manufacturing remnants, and separates materials for recycling.

Nike then works with partners such as Playtop to incorporate **Nike Grind** rubber granulate into premium-quality sports and play surfaces.

Playtop Limited also provides financial support to the Nike community investment programme, **NikeGO Places**, to fund new sports and play surfaces for schools and communities.

For more information please ask for our **NikeGO Places** leaflet or visit www.nikegrind.com
