

Our Vision

A green and sustainable world with people living in harmony with their environment.

This vision is at the heart of everything that happens at Watermatic and our commitment is to the intelligent use of valuable water.

Our Mission

To help create a universal change in the application and use of water within the Green Industry through intelligent systems supported by the world's best products.

Our Approach

Our no obligation comprehensive estimates are produced by specialist estimating engineers estimate from either plans or site visits.

We arrange meetings to discuss your requirements and advise on the options available to you, bearing in mind any regulatory or budgetary constraints. These options will usually cover the feasibility of including irrigation, rainwater harvesting and/or grey water recycling systems.

Our clients include building contractors, landscape architects and garden designers. We work with them from concept to delivery and beyond. We understand their requirements for speed, cost process and compliance. We work efficiently in partnership with them on all issues.

We source our equipment and technologies from the world's best suppliers to support the most effective solutions.

Sustainability

As fresh treated mains water is becoming more precious, expensive and carries a large carbon footprint, we see Recycling and reuse as our future. Watermatic faces up to and helps resolve the escalating environmental problems that affect all of us.

Watermatic are committed to ongoing education, technical design, advancement and supply of best product and expert installation of comprehensive systems to help preserve our water resources. We are sponsors of World Water Day events supporting the international water charity, WaterAid, and we offer in-house Continuous Professional Development seminars both aimed at industry professionals.

Design • Install • Maintain

Intelligent use of valuable water

Irrigation Systems • Rainwater Harvesting • Grey Water Recycling

Green Roofs

Reliable water management is a key factor in their success, and Watermatic have been at the forefront of green roof irrigation working with designers and engineers to incorporate rainwater harvesting, remote monitoring and other control systems.

Rapid growth is occurring in green roof installations. They make sense and are gaining popularity in the UK with regulators and developers alike.

The UK trend is following the lead of other countries where green roofs have been a commercial planning and environmental success story.

Forward thinking legislation in Germany has already encouraged huge growth in green roof installations.

Green Walls

Watermatic have installed, monitor and maintain a growing number of magnificent green walls from the Olympic Village and inner city community centres, to the 'poshest' patios.

There is such variety from relatively simple vertical plantings to stunning architectural design pieces. In between, there are green screens to hide graffiti, walls that 'green' utility buildings into facets of urban landscape and vertical gardens to create a delightful urban oasis.

We find them inside and outdoors in upmarket retail developments, adorning chic patios and terraces and providing inner city pockets of pleasantness.

These are truly living walls and, as with all vegetation, it is essential to their survival that they are irrigated and fertilised appropriately.

Almost every surface can be used to help to improve both the urban eco system and urban psychology in compelling ways.

Rainwater Harvesting

Watermatic are experienced installers of commercial Rainwater Harvesting Systems. Rain water is collected from surfaces and roofs in office buildings, schools, flats and housing developments and directed to a tank system with filtration. This is free water and is ideal for use in toilet flushing and landscape irrigation. Having it free is one thing, but designing systems to minimise upfront costs and save money on installation and maintenance is where Watermatic's expertise really counts.

Grey Water Recycling

Collecting and re using a precious resource, saving money and the environment. This water is free and available. Our grey water systems collect 'waste' water from commercial and housing developments. This is ideal for landscape irrigation, and it can also be treated and recycled for toilet flushing using one of our processing systems.

Watermatic's bespoke solutions match water gathering capability with demand. There can also be good return on initial investment as a result of ongoing cost savings together with a really positive environmental impact.

Water Management Consultancy

Watermatic offer Water Management consultancy at the planning and design stages to optimise the results, and ensure that projects are really deliverable on budget.
